SUMMARY

Software Engineer with 3+ years shipping production distributed systems across fintech, govtech, and research domains. Builds full-stack applications with Angular/React, Spring Boot, and FastAPI, and integrates intelligent features using LLMs, RAG pipelines, and agentic AI. Proven track record of owning problems end-to-end across system design and DevOps (AWS, Kubernetes) in fast-paced Agile teams.

EXPERIENCE

Acculevel

June 2026 – Present

Software AI Engineer

Lafayette, IN

- Designed and managed **n8n** automation workflows orchestrating AI models, internal tools, and third-party APIs to replace recurring manual processes across the team.
- Engineered **cron-scheduled** automation tools that auto-publish posts and photos to **Google Business Profiles**, eliminating a fully 10hours/week manual publishing workflow.

GovieRates

Mar 2026 – May 2026

Software Engineer - Intern

Largo, MD

- Built a middleware REST API layer using **Java Spring Boot** that acts as a data sync bridge between the GovieRates accounting platform and Project Magnus (a DCAA-compliant timesheet system), eliminating data mismatches across client accounts.
- Built an end-to-end client onboarding flow integrating SSO JWT entry from GovieRates, Stripe subscription payment with a **7-tier pricing model**, and automated multi-tenant provisioning, onboarding **30+ existing clients** onto the new product and adding **\$5,000/month** in recurring revenue.
- Tech Stack: **Next.js 15, Java Spring Boot, MongoDB Atlas, JWT, Stripe, Azure Container Apps**

University of Maryland

Apr 2024 – Jan 2025

Research Assistant (Software Engineer)

College Park, MD

- Developed a full-stack AgriTech web application to predict Brown Patch disease severity, assembling a **10GB+ training dataset** by unifying data from PDFs, websites, and NOAA weather data from **AWS S3**.
- Improved model accuracy **from 74% to 91%** through Köppen climate-based regional segmentation and stepwise feature selection; trained Random Forest and Neural Network models using **AWS SageMaker**.
- Deployed serverless inference via **AWS Lambda and API Gateway** for cost-efficient scaling.
- Tech Stack: **Python, TesseractOCR, BeautifulSoup, REST APIs, AWS (S3, Lambda, API Gateway), TensorFlow, Scikit-learn**

Infosys

May 2021 – Dec 2023

Software Engineer

Hyderabad, India

- Diagnosed a latency bottleneck in the search suggestion API during development, profiled the Cypher query and serialization layer, re-architected both with optimized queries and Protobuf, reducing response time from **~200ms to ~30ms per keystroke**.
- Integrated LLMs to boost NLU search accuracy from **85% to 92%** and designed a Graph Neural Network (GNN) microservice for link prediction on a financial services platform.
- Simplified microservice data serialization to create a minimal API payload, cutting network traffic by **68% (465KB to 148KB)**.
- Refactored a legacy Angular front-end using **SOLID principles** and the Adapter Design Pattern; standardized WCAG 2.1 Level AA accessibility, resolving **40+ UI barriers**.
- Led a team of three** to automate the regression testing pipeline, eliminating **20 hours** of manual effort per release.
- Tech Stack: **Angular, TypeScript, Python, Java, Node.js, Spring Boot, RESTful APIs, PostgreSQL, Neo4j, Cypher, GraphQL, LLMs, NGINX, Docker, Kubernetes**

PROJECTS

Support Triage Agent | *Python, RAG, LangChain, LLMs* | [GitHub](#)

May 2026

- Built a **Python RAG agent** that triages support tickets across **3 product domains**, grounding every response in a **765-article** corpus via hybrid retrieval (BM25 + embeddings + LLM rerank) - a **24-hour solo build**.
- Designed a **4-stage pipeline** (triage - citation-enforced response - independent verifier - deterministic escalation) to prevent hallucinated answers, with reproducible, restartable execution.

EDUCATION

University of Maryland, College Park

Master of Engineering, Software Engineering — GPA: 3.93

College Park, MD

Jan 2024 – Dec 2025

CERTIFICATIONS

- **Claude Code in Action** by Anthropic | [Credential](#)

ACHIEVEMENTS & PUBLICATIONS

- **Top 100 Rank (Top 0.06%)**, HackwithInfy National Coding Competition (167,000+ participants).
- **Runner-up among 95 teams** in the WatsonX Chatbot Challenge | [Submission](#)
- Competitive programmer: Highest rating CodeChef 1799, CodeForces 1370.
- **Solved 600+** advanced algorithmic problems across major platforms ([LeetCode](#), [CodeForces](#), [CodeChef](#), [HackerRank](#)).
- Published: "Analyzing Twitter Event Hype vs. Reality" – NLP sentiment analysis (IJRAR) | [Paper](#)

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, Cypher (Graph Query), Shell Scripting

AI/ML: RAG, LangChain, LangGraph, OpenAI/Gemini APIs, PyTorch, TensorFlow, NLP, MCP

Frontend: Angular (Expert), React, Next.js, Flutter, HTML5, SCSS, RxJS

Backend: Spring Boot, FastAPI, Flask, GraphQL, gRPC

DevOps: AWS (Lambda, SageMaker, EC2), Azure Container Apps, Docker, Kubernetes, NGINX, GitHub Actions, Vercel, CI/CD

Databases: PostgreSQL, MongoDB, Neo4j, Redis

Tools: Cursor, Claude Code, Git, Postman
